### DETAILED ACTION

Receipt is acknowledged of applicants' Amendment and Response filed on May 23, 2003.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 3 and 5-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The Examiner in his first communication to the applicants mailed on April 8, 2003, requested more information regarding certain terminology to better understand applicants' invention. The terminology in question are as follows:

- vital matter
- sympathy of energy
- things of life
- native wavelength
- the original active rhythm of the human body
- bioaffinity
- velocity and efficiency of refinement towards advantages of the living body.

The Examiner is unclear as to what these terms and phrases mean in relation to the invention. These terms cannot be found in the resources available to the Examiners at the United States Patent & Trademark Office. These terms cannot be readily found

Art Unit: 1615

in references such as biochemistry textbooks, physics textbook, chemistry textbook, Encyclopedia of Life Sciences, Kirk-Othmer Encyclopedia of Chemical Technology, McGraw-Hill Encyclopedia of Science and Technology, Stedman's Medical Dictionary, Ullmann's Encyclopedia of Industrial Chemistry or Webster's Unabridged Dictionary.

Applicants' have provided no further documentation, definition or explanation for these terms. Therefore, the application contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Any further information or explanation applicants can provide to show that the terminology highlighted herein is known and has a known meaning in the art is requested. It is suggested that some explanation, definition or documentation be provided to clarify the terminology. It is also suggested that the Specification be amended to better define what the questionable terminology means either by using different terms or providing further definition.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 3 depends upon Claim 1 and recites "wherein the composition is composed of" and then recites different component than are recited in Claim 1. It is unclear whether Claim 3 is further defining the composition of the Claim 1 or is reciting an entirely different composition. Appropriate correction or amending is suggested.

Claim also recites as a component "and other elements". It is unclear what applicants are intending to convey with this component. Does applicant intend to convey that any other known element is appropriate for the composition? Appropriate correction or clarification is suggested.
